# Critical Care Transport

MedStar EMS proudly introduces its new **Critical Care Transport** service.

MedStar's **Critical Care Transport** ambulance is equipped with state-of-the-art technology, allowing us to transport the critical patient in a mobile hospital setting.

The specially outfitted ambulance, staffed by an Advanced Practice Paramedic, is capable of transporting patients while maintaining the highest levels of care.

Advanced care now covers:

- cardiac patients receiving vasoactive, anticoagulant, or fibrinolytic infusions,
- mechanically ventilated patients,
- patients needing invasive monitoring,
- patients undergoing IABP therapy, or
- any patient needing continuous ICU level care en route.

## Critical Care Transport ambulance

- *Specialized monitor with expanded monitoring capabilities*
- *Ventilator*
- *Electric hydraulic cot*
- *Drugs equivalent to those used in hospital intensive care units*
- *Pulse generator (external pace maker)*
- *Multiple IV pumps*

MedStar now provides **Critical Care Transport** service for inter-facility transports originating within the MedStar service area, as well as long distance transports.
